

Step 1 - Setup VPN Connection on Mac

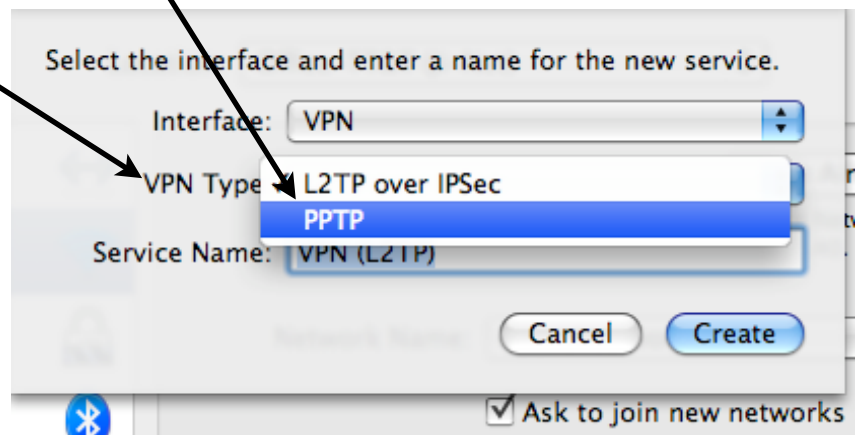

1. Click the "Apple Sign" on your upper left Screen
2. Scroll down and click on "System Preferences"
3. Click on "Network"
4. Click on the "+" sign on the lower left corner of the Network Window

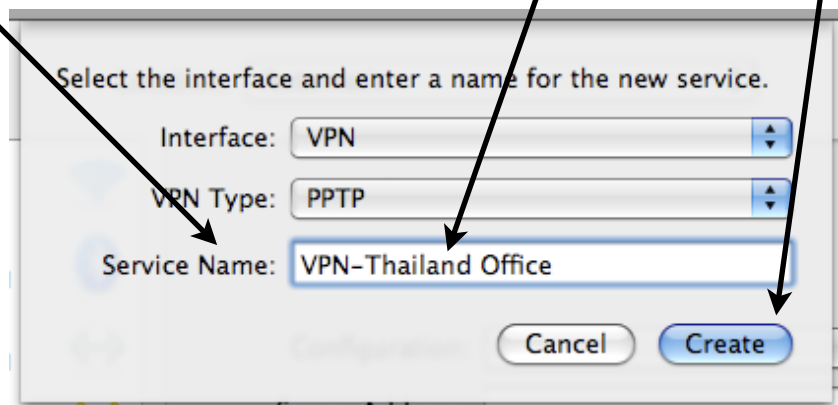

5. In the following Windows under "Interfaces" please select "VPN"

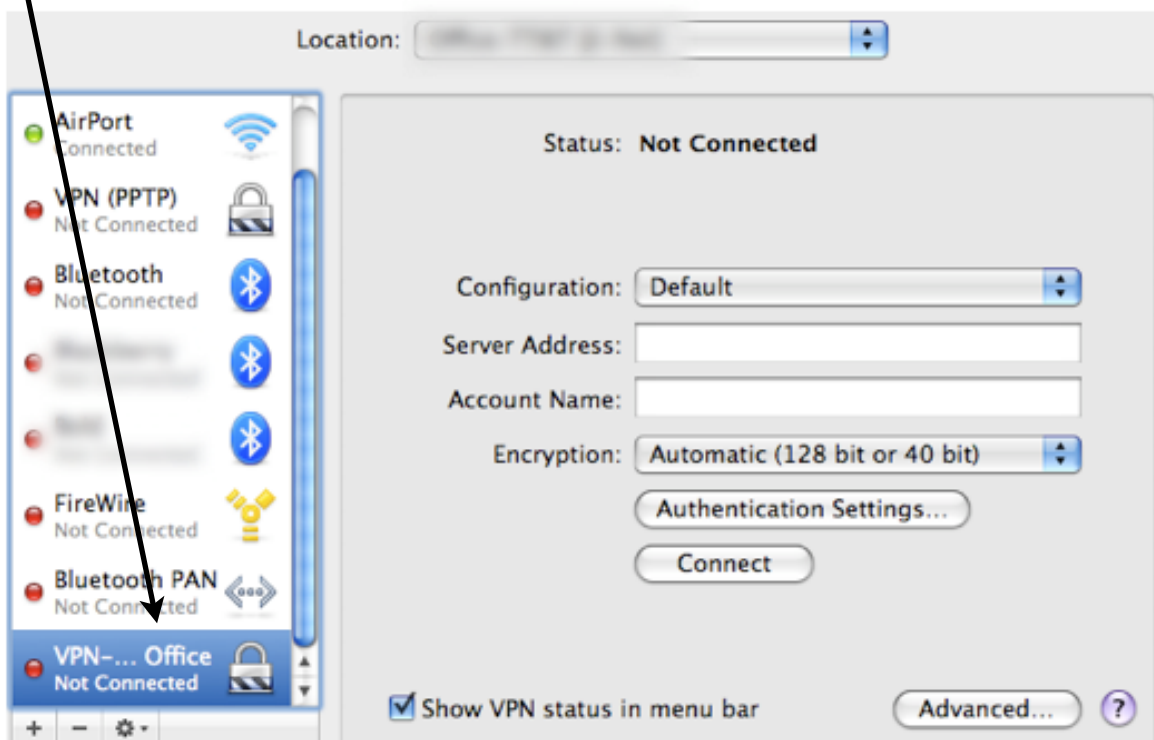

6. Under "VPN Type" please select "PPTP"

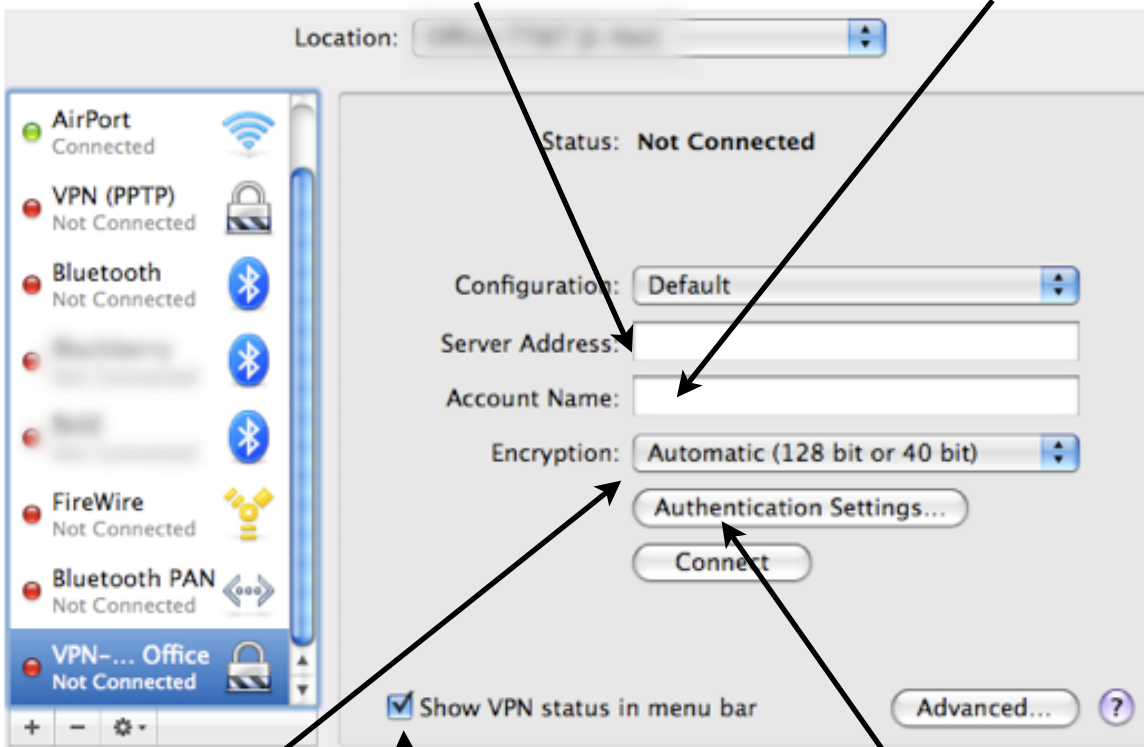

7. Under "Service Name" enter any name for the connection like "VPN", then click "Create"

8. Select the newly created connection in the left panel on your "Network" Window.

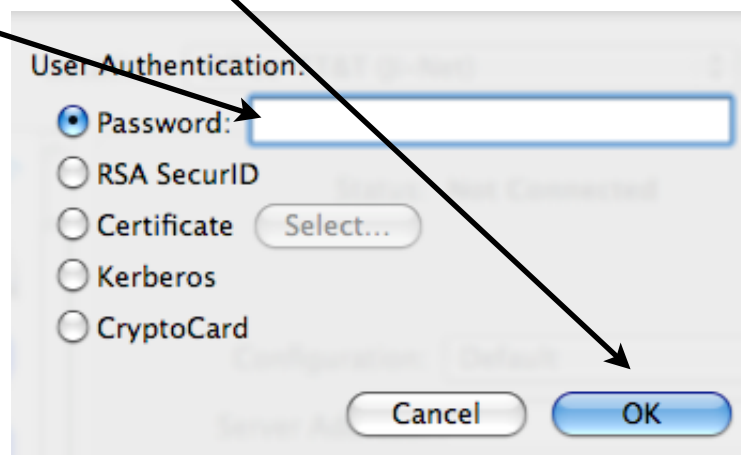

9. Fill in "Server Address / IP address" as provided by NetSol and your given Username

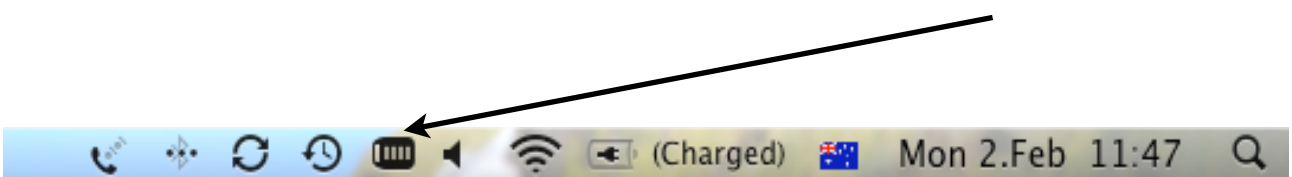

- * Ensure that "Encryption" is set as on the Screenshot above.
 - * Ensure that "Show VPN status in menu bar" is checkmarked.
10. Now click on "Authentication Settings"

11. Enter the Password provided and click "OK"

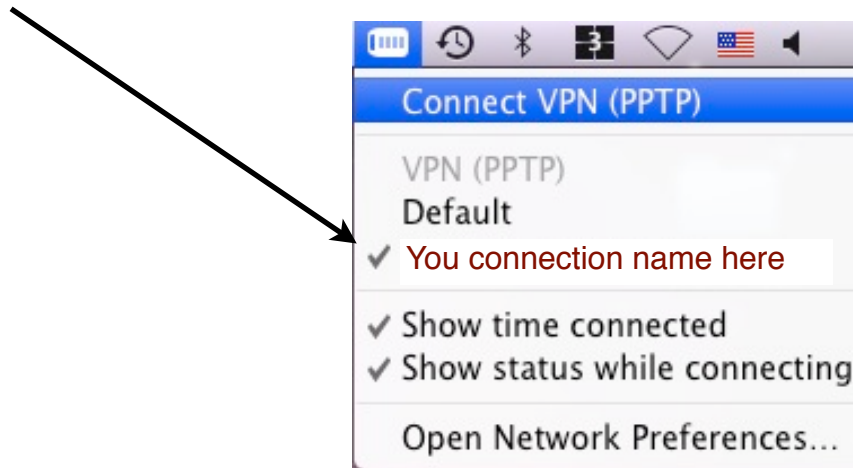

12. Click "Apply"

13. On your Menu Bar on the top of the screen you will now find a new icon

14. Click on this icon and then click on "Connect VPN"

Note: If you have several VPN connections setup, ensure the one for your Office in Thailand is checkmarked.

15. After you connected successfully, a time shows next to the VPN connection sign as shown on the picture below.

16. To disconnect from the connection, click the sign again and the "Disconnect".
